British Standard Gratings - Safe Access Solutions

December 2010

New investment pays off for BSG

The recent investment in a new factory and new equipment by British Standard Gratings at Cradley Heath in the West Midlands has already started to bear fruit with several large projects already won.

The new Heathrow Terminal 2 project is now underway and BSG is supplying 17,000 metres of temporary edge protection for use during the construction of the new building. The product features a recently launched corrugated, light-weight GRP toe plate which is proving to be a well received enhancement to the existing product range.

Additionally, at London Gatwick Airport, BSG has been contracted to supply gratings and tubular fittings to construct parapet barriers within a new multi-storey car park. All the items are powder coated and this bespoke product is a first for BSG, utilising this size of grating in a vertical rather than horizontal plane.

Commenting on the successful move to Cradley Heath, Barry Trubshaw, General Manager at BSG says "Our commitment to the West Midlands remains as strong as ever and we are determined to stay in the area and maintain our skilled workforce, which coupled with an efficient purpose designed factory enables us to be highly competitive and offer improved service to our customers.

The benefits of our move are already clear, with the two high profile airport jobs already in production and numerous other contracts in the order book."

Visit our new website

BSG has just launched its new website at www.bsgratings.com which contains information on the range of additional products that BSG can offer including handrail standards, ladders, gates and the full range of grating solutions.
